

# Essentials of Competitive Coding

Suyash Agrawal

September 19, 2017

# What is it?

Here is what wikipedia says:

# What is it?

Here is what wikipedia says:

*Competitive programming is a mind sport usually held over the Internet or a local network, involving participants trying to program according to provided specifications.*

# What is it?

Here is what wikipedia says:

*Competitive programming is a mind sport usually held over the Internet or a local network, involving participants trying to program according to provided specifications.*

Why is it useful?

# What is it?

Here is what wikipedia says:

*Competitive programming is a mind sport usually held over the Internet or a local network, involving participants trying to program according to provided specifications.*

Why is it useful?

- You will become a better, more efficient, and less error-prone coder.

# What is it?

Here is what wikipedia says:

*Competitive programming is a mind sport usually held over the Internet or a local network, involving participants trying to program according to provided specifications.*

Why is it useful?

- You will become a better, more efficient, and less error-prone coder.
- Your technical programming interviews will be a piece of cake.

# What is it?

Here is what wikipedia says:

*Competitive programming is a mind sport usually held over the Internet or a local network, involving participants trying to program according to provided specifications.*

Why is it useful?

- You will become a better, more efficient, and less error-prone coder.
- Your technical programming interviews will be a piece of cake.
- You win prizes and trips to places around the world as you compete with and meet other motivated and smart students.

# Pre-requisites

Here are some pre requisites:

# Pre-requisites

Here are some pre requisites:

- Language basic of either C++ or Java.

# Pre-requisites

Here are some pre requisites:

- Language basic of either C++ or Java.
- Basic algorithmic skills.

# Pre-requisites

Here are some pre requisites:

- Language basic of either C++ or Java.
- Basic algorithmic skills.

*And most importantly,*

# Pre-requisites

Here are some pre requisites:

- Language basic of either C++ or Java.
- Basic algorithmic skills.  
*And most importantly,*
- Perseverance

# Mathematics

Some knowledge of mathematics is required too, like:

# Mathematics

Some knowledge of mathematics is required too, like:

- Modulo Arithmetic *Basic Number Theory*

# Mathematics

Some knowledge of mathematics is required too, like:

- Modulo Arithmetic *Basic Number Theory*
- Fast Exponentiation

# Mathematics

Some knowledge of mathematics is required too, like:

- Modulo Arithmetic *Basic Number Theory*
- Fast Exponentiation
- Complexity Analysis

# Mathematics

Some knowledge of mathematics is required too, like:

- Modulo Arithmetic *Basic Number Theory*
- Fast Exponentiation
- Complexity Analysis
- Sieve of Eratosthenes

# Mathematics

Some knowledge of mathematics is required too, like:

- Modulo Arithmetic *Basic Number Theory*
- Fast Exponentiation
- Complexity Analysis
- Sieve of Eratosthenes
- Basic Geometry

# Mathematics

Some knowledge of mathematics is required too, like:

- Modulo Arithmetic *Basic Number Theory*
- Fast Exponentiation
- Complexity Analysis
- Sieve of Eratosthenes
- Basic Geometry

Don't worry even if you have no idea about these. You will easily pick these up as you practice along.

# Problem Structure

Basic structure of the problem is as follows:

# Problem Structure

Basic structure of the problem is as follows:

- **Problem Statement:** Describes the problem and what output is to be generated. Usually in form of a long story from which you have to extract the essence.

# Problem Structure

Basic structure of the problem is as follows:

- **Problem Statement:** Describes the problem and what output is to be generated. Usually in form of a long story from which you have to extract the essence.
- **Input:** Describes the format of input. Read carefully as missing out any minor detail lands you in wrong answer zone.

# Problem Structure

Basic structure of the problem is as follows:

- **Problem Statement:** Describes the problem and what output is to be generated. Usually in form of a long story from which you have to extract the essence.
- **Input:** Describes the format of input. Read carefully as missing out any minor detail lands you in wrong answer zone.
- **Output:** Describes the output format of the problem . Just like above, this one also should be read carefully.

# Problem Structure

Basic structure of the problem is as follows:

- **Problem Statement:** Describes the problem and what output is to be generated. Usually in form of a long story from which you have to extract the essence.
- **Input:** Describes the format of input. Read carefully as missing out any minor detail lands you in wrong answer zone.
- **Output:** Describes the output format of the problem . Just like above, this one also should be read carefully.
- **Constraints:** These can include constraints on input, time, memory, code size, etc.

# Problem Structure

Basic structure of the problem is as follows:

- **Problem Statement:** Describes the problem and what output is to be generated. Usually in form of a long story from which you have to extract the essence.
- **Input:** Describes the format of input. Read carefully as missing out any minor detail lands you in wrong answer zone.
- **Output:** Describes the output format of the problem . Just like above, this one also should be read carefully.
- **Constraints:** These can include constraints on input, time, memory, code size, etc.
- **Time Limit:** See if your algorithm can work in this range.

# Problem Structure

Basic structure of the problem is as follows:

- **Problem Statement:** Describes the problem and what output is to be generated. Usually in form of a long story from which you have to extract the essence.
- **Input:** Describes the format of input. Read carefully as missing out any minor detail lands you in wrong answer zone.
- **Output:** Describes the output format of the problem . Just like above, this one also should be read carefully.
- **Constraints:** These can include constraints on input, time, memory, code size, etc.
- **Time Limit:** See if your algorithm can work in this range.
- **Memory Limit:** Usually not a deal breaker (unless you are doing something ghastly!).

# Example I

**Problem:** Consider a currency system in which there are notes of seven denominations, namely, Rs. 1, Rs. 2, Rs. 5, Rs. 10, Rs. 50, Rs. 100. If the sum of Rs.  $N$  is input, write a program to computer smallest number of notes that will combine to give Rs.  $N$ .

# Example I

**Problem:** Consider a currency system in which there are notes of seven denominations, namely, Rs. 1, Rs. 2, Rs. 5, Rs. 10, Rs. 50, Rs. 100. If the sum of Rs.  $N$  is input, write a program to computer smallest number of notes that will combine to give Rs.  $N$ .

**Input:** The first line contains an integer  $T$ , total number of testcases. Then follow  $T$  lines, each line contains an integer  $N$ .

# Example I

**Problem:** Consider a currency system in which there are notes of seven denominations, namely, Rs. 1, Rs. 2, Rs. 5, Rs. 10, Rs. 50, Rs. 100. If the sum of Rs.  $N$  is input, write a program to computer smallest number of notes that will combine to give Rs.  $N$ .

**Input:** The first line contains an integer  $T$ , total number of testcases. Then follow  $T$  lines, each line contains an integer  $N$ .

**Output:** Display the smallest number of notes that will combine to give  $N$ .

# Example I

**Problem:** Consider a currency system in which there are notes of seven denominations, namely, Rs. 1, Rs. 2, Rs. 5, Rs. 10, Rs. 50, Rs. 100. If the sum of Rs.  $N$  is input, write a program to computer smallest number of notes that will combine to give Rs.  $N$ .

**Input:** The first line contains an integer  $T$ , total number of testcases. Then follow  $T$  lines, each line contains an integer  $N$ .

**Output:** Display the smallest number of notes that will combine to give  $N$ .

**Constraints:**  $1 \leq T \leq 1000$     $1 \leq N \leq 1000000$

## Example II

**Example:**

**Input**

3

1200

500

242

**Output**

12

5

7

## Example II

**Example:**

**Input**

3

1200

500

242

**Output**

12

# Tools Needed

These things are sufficient to practice coding:

## Tools Needed

These things are sufficient to practice coding:

- Simple Text Editor. **No IDE !**

## Tools Needed

These things are sufficient to practice coding:

- Simple Text Editor. **No IDE !**
- Compiler. GCC is standard

## Tools Needed

These things are sufficient to practice coding:

- Simple Text Editor. **No IDE !**
- Compiler. GCC is standard
- Preferably Linux OS (Ubuntu works best)

# Tools Needed

These things are sufficient to practice coding:

- Simple Text Editor. **No IDE !**
- Compiler. GCC is standard
- Preferably Linux OS (Ubuntu works best)
- Internet Connection (for problem statements)

## Tools Needed

These things are sufficient to practice coding:

- Simple Text Editor. **No IDE !**
- Compiler. GCC is standard
- Preferably Linux OS (Ubuntu works best)
- Internet Connection (for problem statements)
- Online compilers like Ideone , Codechef IDE can also be used.  
*Beware, they are painfully slow*

Let us look at some basic problems.

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ?

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ? Exponential ?

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ? Exponential ?

If yes, try making it linear

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ? Exponential ?

If yes, try making it linear

**Hint**

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ? Exponential ?

If yes, try making it linear

## Hint

*Try writing a recurrence relation*

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ? Exponential ?

If yes, try making it linear

## Hint

*Try writing a recurrence relation*

$Fib(0) = 0$

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ? Exponential ?

If yes, try making it linear

## Hint

*Try writing a recurrence relation*

$$Fib(0) = 0$$

$$Fib(1) = 1$$

# Fibonacci Numbers

Write a program to return  $n^{th}$  Fibonacci number.

Fibonacci numbers follow the series: 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

What is the complexity of your code ? Exponential ?

If yes, try making it linear

## Hint

*Try writing a recurrence relation*

$$Fib(0) = 0$$

$$Fib(1) = 1$$

$$Fib(n) = Fib(n - 1) + Fib(n - 2) \quad , n \geq 2$$

# Exponentiation

Write a program to calculate  $a^b$  given  $a$  and  $b$  as inputs. Both are natural numbers and the result is expressible in *int* range.

# Exponentiation

Write a program to calculate  $a^b$  given  $a$  and  $b$  as inputs. Both are natural numbers and the result is expressible in *int* range.

Did you calculate it as:  $\underbrace{a * a * \dots * a}_{b\text{-times}}$

# Exponentiation

Write a program to calculate  $a^b$  given  $a$  and  $b$  as inputs. Both are natural numbers and the result is expressible in *int* range.

Did you calculate it as:  $\underbrace{a * a * \dots * a}_{b\text{-times}}$

*Can you do better?*

# Exponentiation

Write a program to calculate  $a^b$  given  $a$  and  $b$  as inputs. Both are natural numbers and the result is expressible in *int* range.

Did you calculate it as:  $\underbrace{a * a * \dots * a}_{b\text{-times}}$

*Can you do better?*  
*Of Course!*

# Exponentiation

Write a program to calculate  $a^b$  given  $a$  and  $b$  as inputs. Both are natural numbers and the result is expressible in *int* range.

Did you calculate it as:  $\underbrace{a * a * \dots * a}_{b\text{-times}}$

*Can you do better?*

*Of Course!*

**Use Fast Exponentiation!**

# Interval Selection

This is a harder problem than the above ones.

# Interval Selection

This is a harder problem than the above ones.

You are given  $n$  activities with their start and finish times. Select the maximum number of activities that can be performed by a single person, assuming that a person can only work on a single activity at a time.

# Interval Selection

This is a harder problem than the above ones.

You are given  $n$  activities with their start and finish times. Select the maximum number of activities that can be performed by a single person, assuming that a person can only work on a single activity at a time.

*Try doing it on your own. If nothing comes, then Google!*
